

Rola-Trac™

Light Weight Event Flooring and Pedestrian Access

Part of the MacroTrac family of portable flooring and roadway products in North America, Rola-Trac is a durable, lightweight, and easy-to-install decking system. Providing outstanding turf protection and a safe, slip-resistant surface, Rola-Trac is ideal for event and tent flooring, hard standing and military tent flooring, field hospitals, walkways, patios, pet areas, outside displays, athletic field coverings, and temporary or semi-permanent wheelchair access.

The material used to manufacture Rola-Trac is engineering-grade plastic that will not expand in heat or break easily. As a result, Rola-Trac works well for both indoor and outdoor events and is ideal for a wide range of uses.

PRODUCT INFORMATION

Panel Size: 13.0 x 6.5 x 0.6" (L x W x H)

Panel Area: .59 Sq Ft

Panel Weight: 0.4 lbs

High-Impact Polypropylene with UV Inhibitors

Load Capacity: 8,000 lbs / Sq Ft (55.6 psi)*

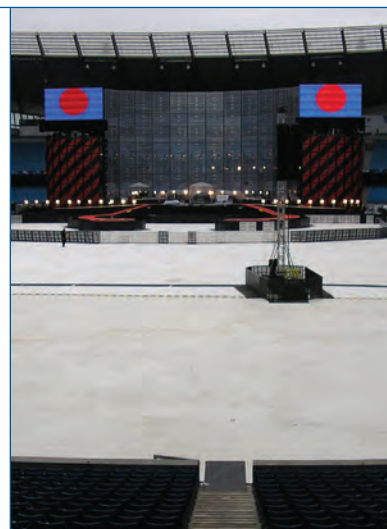

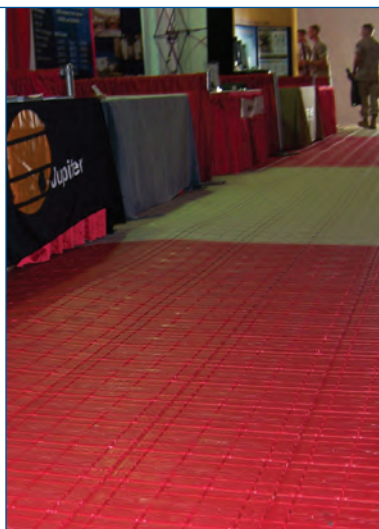

Fire Ratings: **UL94HB, ASTM 2859**

*Static load, solid sub-surface. Varies depending on sub-surface.

MacroTrac flooring products are 100% recyclable.
Please contact Macro Plastics about our recycling program.

Applications

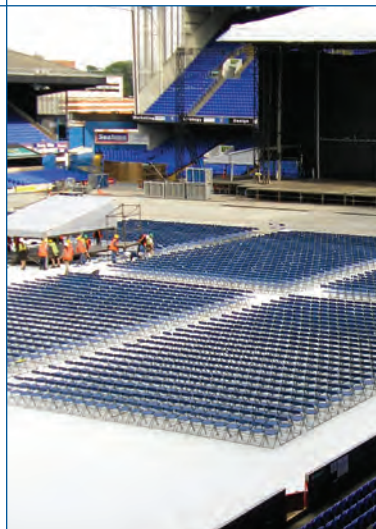

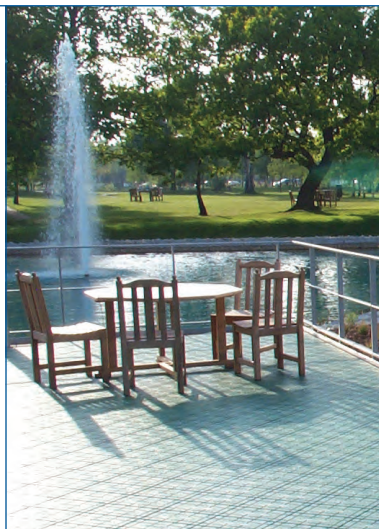

INDOOR EVENTS

Rola-Trac is easy-to-install and requires no special skills or tools for installation. It is delivered in small sheets — simply lay them next to one another and walk along the seam to snap them together.

OUTDOOR EVENTS

Rola-Trac is designed for strength and durability with U-shaped ribs that provide twice the strength of a normal rib. The hinging clips allow for stress-free articulation, so the panels can conform to the surface below.

WALKWAYS

Providing a stable, non-slip, non-reflective surface, Rola-Trac is designed for pedestrian safety with molded-in rain channels and multi-directional tread. Edging ramps allow for easy wheelchair access and eliminate trip hazards.

FIELD COVERAGE

With aeration slots in the panels that allow moisture and air to pass through, Rola-Trac provides excellent turf protection. The unique design disperses weight across the panels, minimizing traffic impact and damage.
